**DETAILED ACTION****Claim Rejections - 35 USC § 112**

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1 and 19 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Where the chromophore having formula (I) or (II) is bound to the metal is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure.

See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). No binding site is presented in the claims or in the specification for binding the compounds [X is formula (I) or (II)] below to the metal in the polymer shown below.

***Allowable Subject Matter***

3. Claims 2-8,20-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: No prior art was found which teaches the polymer in an antireflective composition.

5. Claims 9-18,26-32 are allowed.

6. The following is an examiner's statement of reasons for allowance: No prior art was found reading on the claimed composition or method.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Breyta et al. U.S. patent no. 6,251,562 teaches an antireflective composition comprising a polyphenolic polymer.

Auslander et al U.S. patent no. 5,542,971 teaches an invisible ink comprising a lanthanide such as Eu, Tb, Sm and Dy complexed with a diketone (col. 3, lines 50-54).
